

manage the pile several times during a task, something you don't have to do nearly as much with [single-piece flow]. This also has a factory corollary: storing, moving, retrieving, and looking for work in progress inventory." See the rest of the commentary here: <http://lssacademy.com/2008/03/24/a-response-to-the-video-skeptics/>

3. Timothy Fitz, an early IMVU engineer, deserves credit for having coined the term continuous deployment in a blog post: <http://timothyfitz.wordpress.com/2009/02/10/continuous-deployment-at-imvu-doing-the-impossible-fifty-times-a-day/>. The actual development of the continuous deployment system is the work of too many different engineers at IMVU for me to give adequate credit here. For details on how to get started with continuous deployment, see <http://radar.oreilly.com/2009/03/continuous-deployment-5-eas.html>
4. For technical details of Wealthfront's continuous deployment setup, see <http://eng.wealthfront.com/2010/05/deployment-infrastructure-for.html> and <http://eng.wealthfront.com/2011/03/lean-startup-stage-at-sxsw.html>
5. This description of School of One was provided by Jennifer Carolan of NewSchools Venture Fund.
