

returning a 500 error.

Proportional investment: Jim—We'll work on the API, but let's make our CMS more forgiving for the user. Allow users to add and edit drafts without errors for a better user experience.

Why was the content API returning 500 errors?

Answer: The `bson_ext` gem was incompatible with other gems it depends upon.

Proportional investment: King—Remove the gem (already done to resolve the outage).

Why was the gem incompatible?

Answer: We added a new version of the gem in addition to the existing version and the app started using it unexpectedly.

Proportional investment: Bennett—Convert our rails app to use bundler for gem management.

Why did we add a new version of a gem in production without testing?

Answer: We didn't think we needed a test in these cases.

Proportional investment: Bennett and Jim—Write a unit or functional test in the API and CMS that will catch this in the future.

Why do we add additional gems that we don't intend to use right away?

Answer: In preparation for a code push we wanted to get all new gems ready in the production environment. Even though our code deployments are fully automated, gems are not.

Proportional investment: Bennett—Automate gem management
