

have the opportunity to closely monitor all of the other complaints and consumer feedback they receive. This data will influence the depth, breadth, and sequence of future offerings.

As David Forrest, the CFPB's chief technology officer, told me, "Our goal is to give American citizens an easy way to tell us about the problems they see out there in the consumer financial marketplace. We have an opportunity to closely monitor what the public is telling us and react to new information. Markets change all the time and our job is to change with them."⁶

The entrepreneurs and managers profiled in this book are smart, capable, and extremely results-oriented. In many cases, they are in the midst of building an organization in a way consistent with the best practices of current management thinking. They face the same challenges in both the public and private sectors, regardless of industry. As we've seen, even the seasoned managers and executives at the world's best-run companies struggle to consistently develop and launch innovative new products.

Their challenge is to overcome the prevailing management thinking that puts its faith in well-researched plans. Remember, planning is a tool that only works in the presence of a long and stable operating history. And yet, do any of us feel that the world around us is getting more and more stable every day? Changing such a mind-set is hard but critical to startup success. My hope is that this book will help managers and entrepreneurs make this change.
